- Present the model at the exhibition (5 marks)

18/20
Hebert

HairOil boxes

Toothpaste box

Wrist Watch boxes

Dry waste

Used Plastic

Tv box Cardboard

Old toys

This model promotes the idea of using waste materials to create new and useful products, reducing the need for new raw materials, and decreasing the environmental impact of waste. The approach not only helps in waste reduction but also results in cost savings, as the reuse of waste materials reduces the need for expensive raw materials.

This model is an educational aid that aims to promote segregation of waste as an important aspect of our everyday lives. This educational aid aims to help primary students in the age group of 8-12 i.e standard IV - Standard VII.

Conclusion:

Effective waste management is crucial for protecting the environment and public health. A well-designed waste management model takes into account the sources of waste, the available waste treatment and disposal options, and the needs of the community. Effective waste management requires the participation of all stakeholders, including local governments, waste management companies, and the general public.
